Felipe D'alto

Computer Engineering - Student

Buenos Aires, Argentina | fedalto@fi.uba.ar | github.com/Felipe-Druk | linkedin.com/in/felipe-dalto-informatica

TECHNICAL SKILLS

Languages: Python, Go, C++, Java, Rust, Scala, C, Bash.
Tools: Docker, Git, Linux, PostgreSQL, SQL (Advanced), Pandas, Matplotlib, Excel.
Methodologies: Scrum (Estimate/No estimate), Extreme Programming (XP), TDD, Clean Code, Microservices Design, UX/UI Design.

EXPERIENCE

Facultad de Ingeniería UBA *Buenos Aires, Argentina*
Teaching Assistant - Theory of Algorithms *August 2025 – Present*

- **Teaching and Mentorship:** Reinforced and evaluated understanding of advanced concepts (computational complexity, data structures) and translated abstract topics into practical explanations.
- **YouTube Channel (DrukDev):** Produced and edited explanatory videos on algorithms and complexity for my YouTube channel (DrukDev), using Manim and OBS.

FIUBA Consulting Club *Buenos Aires, Argentina*
Data Analyst *January 2025 – Present*

- **Data Analysis and Visualization:** Collected and processed key event data to identify performance metrics, and created visualizations to present actionable recommendations to the board.

Community Manager *February 2024 – January 2025*

- **Brand Management and UX/UI Design:** Defined the digital brand identity and designed promotional content applying graphic design and UX/UI principles to optimize user engagement.
- **Impact and Collaboration:** Collaborated in a team to produce strategic material for events and publications, driving community growth.

SELECTED PROJECTS

Qalife | *Bash, Git*

- Developed and managed the full tool life cycle in Bash, controlling versioning with Git up to release 0.3.1.

Arquitectura de Microservicios | *Go, Python, Docker, PostgreSQL*

- Designed the `cart-service` in Go with PostgreSQL and Docker, and created the `admindService` in Python using modular templates.

BackOffice GranBazaar | *JavaScript, TypeScript, Docker*

- Developed the administration panel web interface in JavaScript/TypeScript and packaged the environment in Docker to ensure its deployment.

BazaarApp | *TypeScript, Git*

- Designed and implemented the marketplace application in TypeScript, ensuring a scalable code architecture and a smooth user experience.

Pokedex in Go (*Certificate*) | *Go, CLI*

- Developed an interactive command-line client in Go to query the PokéAPI, managing system states in memory cache.

Asteroids (*Certificate*) | *Python, Pygame*

- Programmed an interactive version of the classic Asteroids game in Python with Pygame, implementing vector physics and two-dimensional collisions.

EDUCATION

Facultad de Ingeniería UBA *Buenos Aires, Argentina*
Computer Engineering *March 2021 – Present*

- **Courses:** Software Engineering I & II, Introduction to Software Development, Operating Systems, Computer Networks, Databases, Concurrent Programming, Programming Workshop, Computer Security Workshop, Software Systems Development Management, Machine Learning, Data Science, Theory of Algorithms, Algorithms and Data Structures, Programming Paradigms, Fundamentals of Programming, Computer Organization, Simulation, Discrete Mathematics, Probability and Statistics, Linear Algebra, Mathematical Analysis II, Numerical Modeling, Technology-Based Companies I.
- **Practices:** Developed programming and leadership skills in group projects, deepening architectural design and project delivery.

CERTIFICATIONS

Boot.dev - Backend Development *View Credentials*

- Data Structures and Algorithms in Python | Functional Programming in Python
- Object Oriented Programming in Python | Memory Management in C | SQL
